

# PROJECT PROFILE

## **Red Deer Commercial Building**

Red Deer, AB

### **Location**

7431 Edgar Industrial Drive

### **Owner**

R.W. Gibson Holdings Limited

### **Concrete Supplier**

Inland Concrete Limited, Red Deer

### **Product Used**

HARD-WEAR concrete

### **Total Floor Area**

33,800 ft<sup>2</sup>

### **Project Manager**

Gerd Meske

### **Building Occupants**

The Gear Centre

Pat's Driveline

## **PROJECT BACKGROUND**

After successfully using HARD-WEAR concrete for a project in Lethbridge, Gerd Meske requested the product for the commercial building project in Red Deer. Not only was the product viewed highly by the placers and finishers, the integral mix design of HARD-WEAR concrete was ideal for this commercial application to provide uniform hardness and wear resistance throughout the full depth of the slab.

## **PROJECT RESULTS**

All feedback on HARD-WEAR's performance from those involved in the Red Deer project was very positive. The HARD-WEAR mix was easy to finish and the elimination of the need for shake-on hardeners resulted in reduced labour and improved working conditions.

## **TESTIMONIAL**

"The uniform hardness of HARD-WEAR concrete is something that appealed to me on the Lethbridge project and that I felt would also be beneficial to the commercial building in Red Deer. The integral mix design of HARD-WEAR means there is no longer a need for shake-on hardeners, resulting in an elimination of dust and improved working conditions for the placers and finishers. The result is a hardened concrete that boasts even distribution without the hassles of typical hardeners.

A benefit for the end users is that they are provided with a floor that is easy to maintain with regards to clean up of dirt, dust, oil stains and grease."
