

Type N Masonry Cement

Conforms to National Standards of Canada — CAN/CSA-A8-93

Masonry cement offers the best assurance of mortar uniformity during construction. The cement is prepared under tight quality control standards to ensure consistency from batch to batch. Lehigh Inland's Type N Masonry Cement has the workability properties needed by the mason in a convenient, premixed package.

Uses

Lehigh Inland's Type N Masonry Cement is intended to be used with mortar sand and water in the preparation of Type N Masonry Mortar, or with the use of Normal Portland Cement additions capable of producing Type S mortar.

Lehigh Inland's Type N Masonry Cement is packaged in 30 kg bags.

Specifications

Due to rigid manufacturing standards, Lehigh Inland's Type N Masonry Cement meets existing CSA specifications. The very latest methods, equipment and techniques, as well as constant and strict controls maintained during the manufacturing process, produces a consistently reliable product.

For further information on Type N Masonry Cement, please contact your nearest Lehigh Inland Cement representative.

Important Note

Because of the chemical properties of all types of cement, it is important to be aware of the following: ***Freshly mixed cement, mortar, concrete or grout may cause skin injury. Avoid contact with skin where possible. In the event of contact, wash exposed skin areas promptly with water. If any cement or cement mixtures come into contact with the eyes, rinse immediately and repeatedly with water and get prompt medical attention.***
